
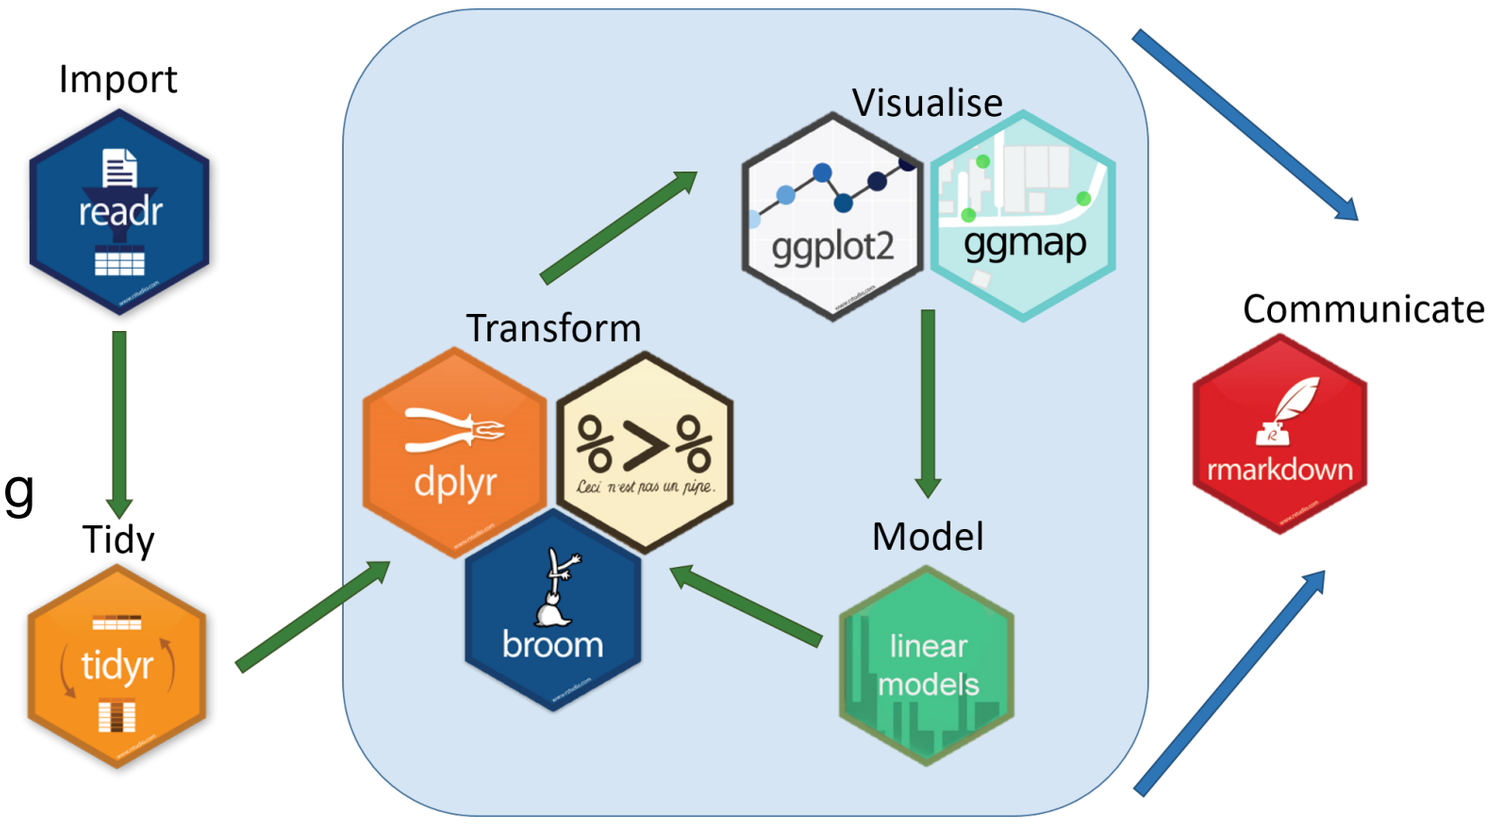
Data Science: GGplot2

Alex Di Genova

28/05/2024

What is Tidyverse?

- A collection of R packages for data science
  - ggplot2 — data visualization
  - dplyr — data manipulation
  - tidyr — data tidying
  - readr — data import
  - purrr — functional programming
  - tibble — modern dataframes
  - stringr — string manipulation
  - forcats — factor handling



- Data science workflow (import, clean, transform, visualize, model)

Tidyverse

Tidy

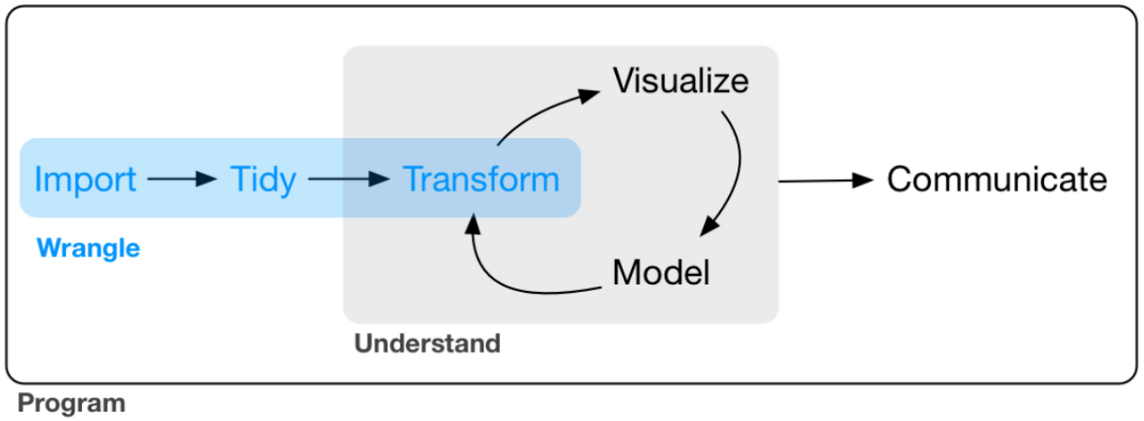
- Tidy dataset:
  - Variables are in columns
  - Observations in rows
  - Values in cells

Tidyverse

Tidy



- Spreading and Gathering
- Dateset where columns are values of a variable

```{r tidy1}
table4a
```

A tibble: 3 × 3

country <chr>	1999 <dbl>	2 <c
Afghanistan	745	2
Brazil	37737	80
China	212258	213

3 rows

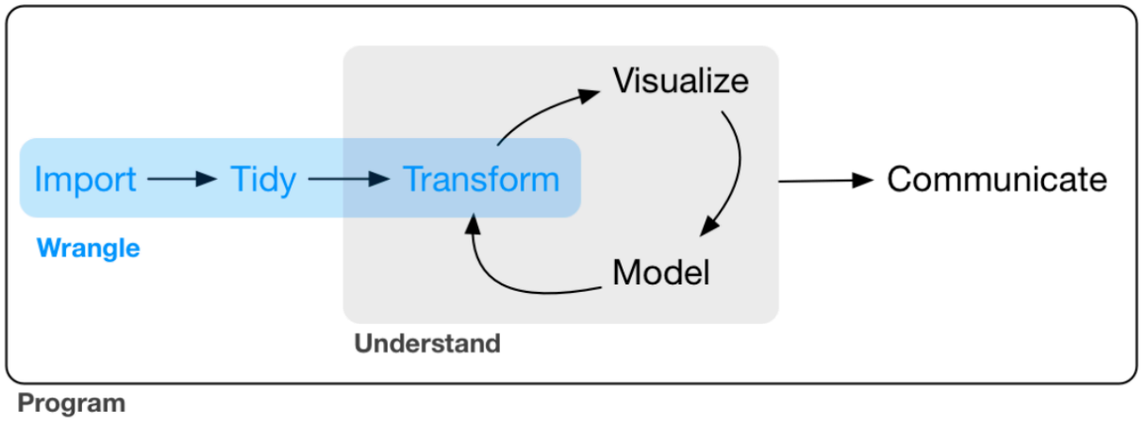
```{r tidy1}
table4a  %>% gather(`1999`,`2000`, key="year",value="population")
```

A tibble: 6 × 3

country <chr>	year <chr>	population <dbl>
Afghanistan	1999	745
Brazil	1999	37737
China	1999	212258
Afghanistan	2000	2666
Brazil	2000	80488
China	2000	213766

Tidyverse

Tidy



- Spreading
  - Opposite of gathering

country	year	key	value
Afghanistan	1999	cases	745
Afghanistan	1999	population	19987071
Afghanistan	2000	cases	2666
Afghanistan	2000	population	20595360
Brazil	1999	cases	37737
Brazil	1999	population	172006362
Brazil	2000	cases	80488
Brazil	2000	population	174504898
China	1999	cases	212258
China	1999	population	1272915272
China	2000	cases	213766
China	2000	population	1280428583

table2

```{r tidy2}
table2 %>%spread(key=type, value=count)
```

A tibble: 6 × 4

country <chr>	year <dbl>	cases <dbl>	population <dbl>
Afghanistan	1999	745	19987071
Afghanistan	2000	2666	20595360

China	2000	**213766**	1280428583

country	year	rate
Afghanistan	19**99**	745 / 19987071
Afghanistan	20**00**	2666 / 20595360
Brazil	19**99**	37737 / 172006362
Brazil	20**00**	80488 / 174504898
China	19**99**	212258 / 1272915272
China	20**00**	213766 / 1280428583

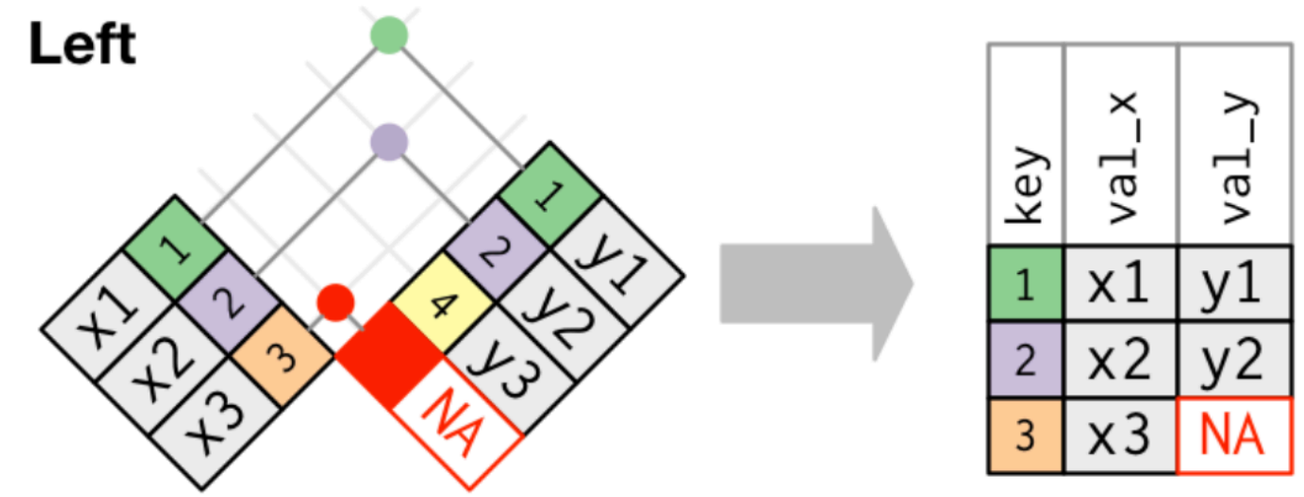
country	century	year	rate
Afghanistan	19	**99**	745 / 19987071
Afghanistan	20	**0**	2666 / 20595360
Brazil	19	**99**	37737 / 172006362
Brazil	20	**0**	80488 / 174504898
China	19	**99**	212258 / 1272915272
China	20	**0**	213766 / 1280428583

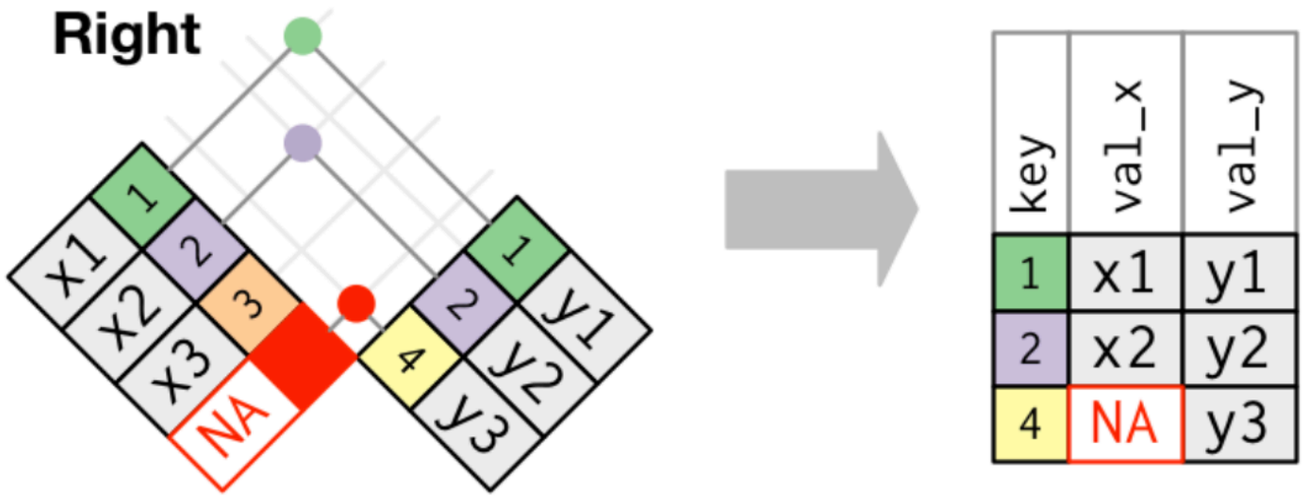
table6

Tidyverse

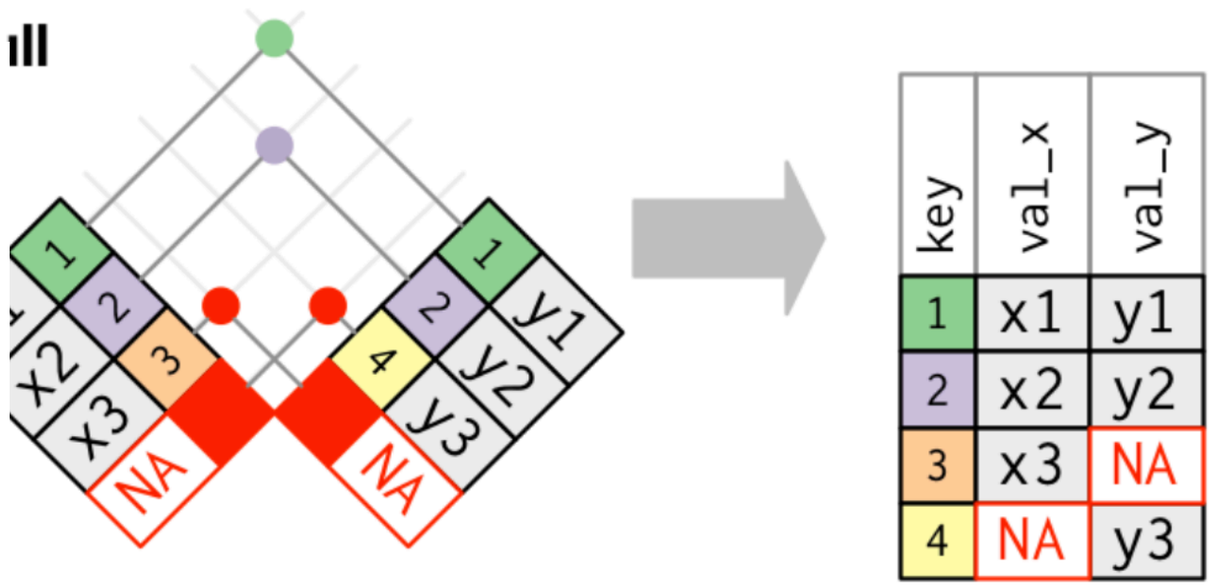
Joins

- Merging two data frames by a key.
  - left_join(x,y, by= “key”)
  - left_join(x,y,by=c(“key1” =“key2”))





dplyr	merge
inner_join(x, y)	merge(x, y)
left_join(x, y)	merge(x, y, all.x = TRUE)
right_join(x, y)	merge(x, y, all.y = TRUE),
full_join(x, y)	merge(x, y, all.x = TRUE, all.y = TRUE)

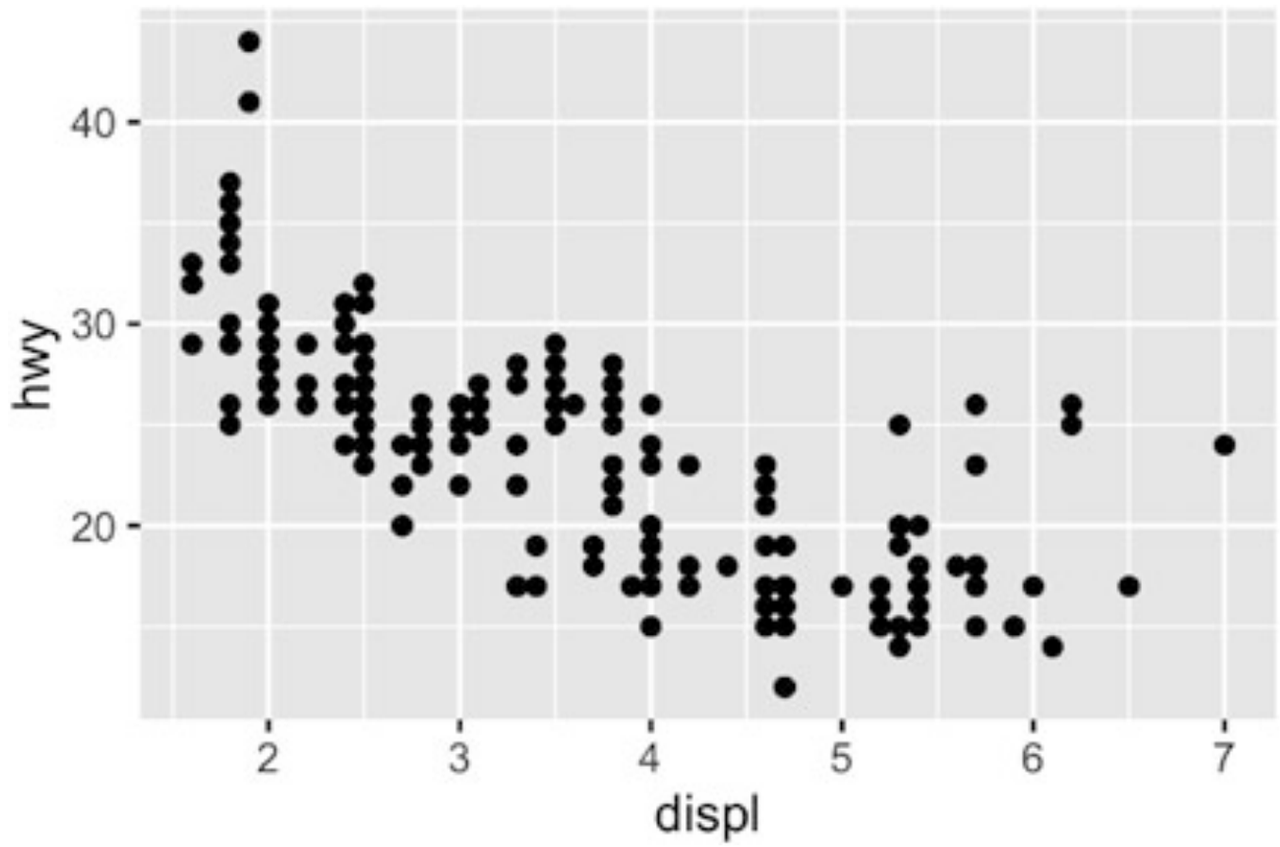


Tidyverse

Ggplot2

- Key Components
  - Data
  - aesthetic mappings -> variables in the data and visual properties
  - At least one layer that describes how to render each observation (geom_)

```
ggplot(mpg, aes(x = displ, y = hwy)) + geom_point()
```

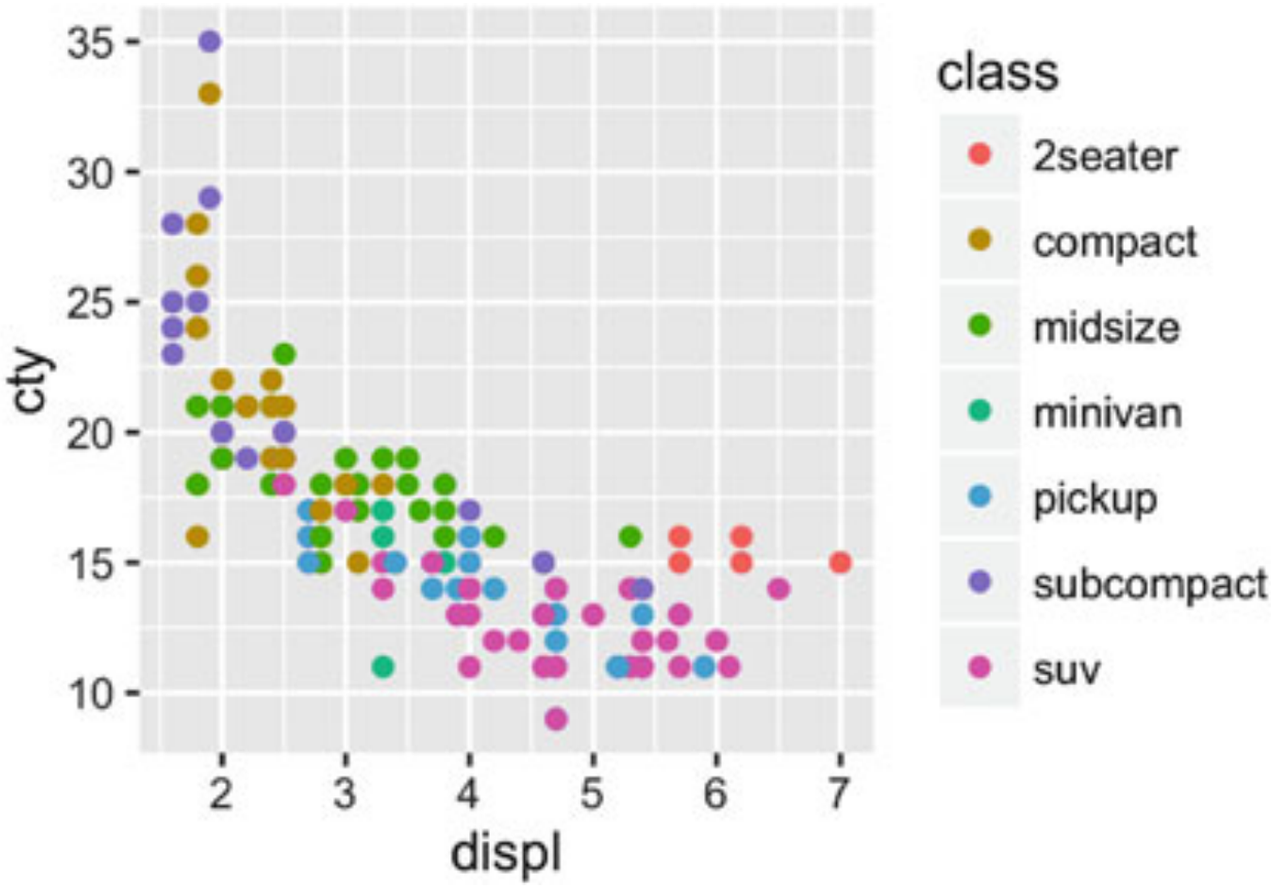


Tidyverse

Ggplot2

- Key Components
  - Data
  - aesthetic mappings -> variables in the data and visual properties
    - Colour, Size, Shape and Other Aesthetic Attributes
    - aes(displ, hwy, colour = class)
    - aes(displ, hwy, shape = drv)
    - aes(displ, hwy, size = cyl)

```
ggplot(mpg, aes(x = displ, y = hwy, colour=class)) +
geom_point()
```

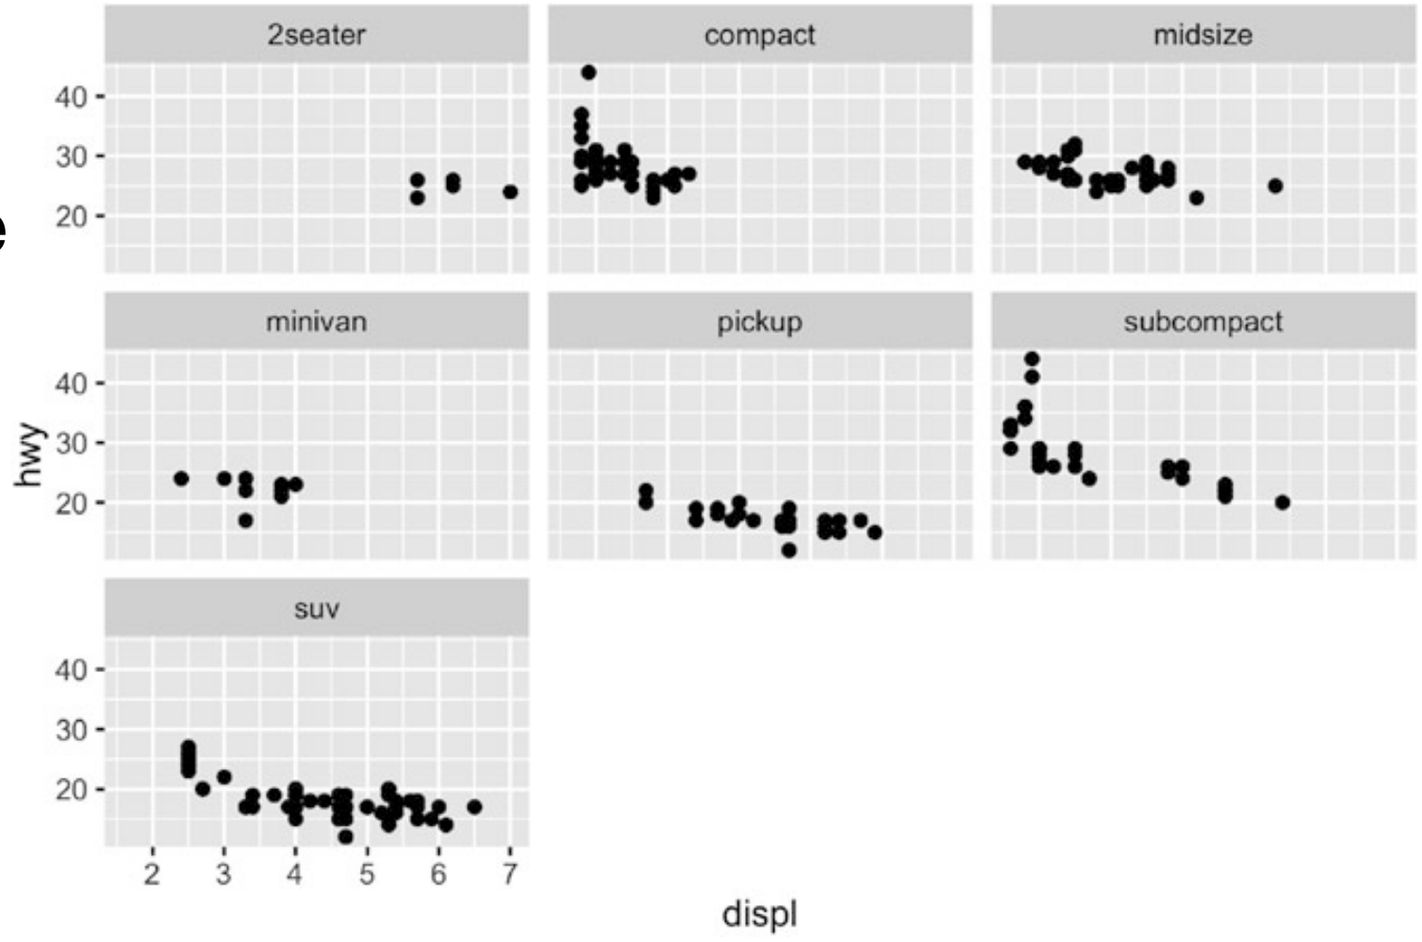


GGplot2

Facets

```
ggplot(mpg, aes(displ, hwy)) +
geom_point() +
facet_wrap(~class)
```

- Faceting
  - creates tables of graphics by splitting the data into subsets and displaying the same graph for each subset
- Grid and wrapped
- facet_wrap()

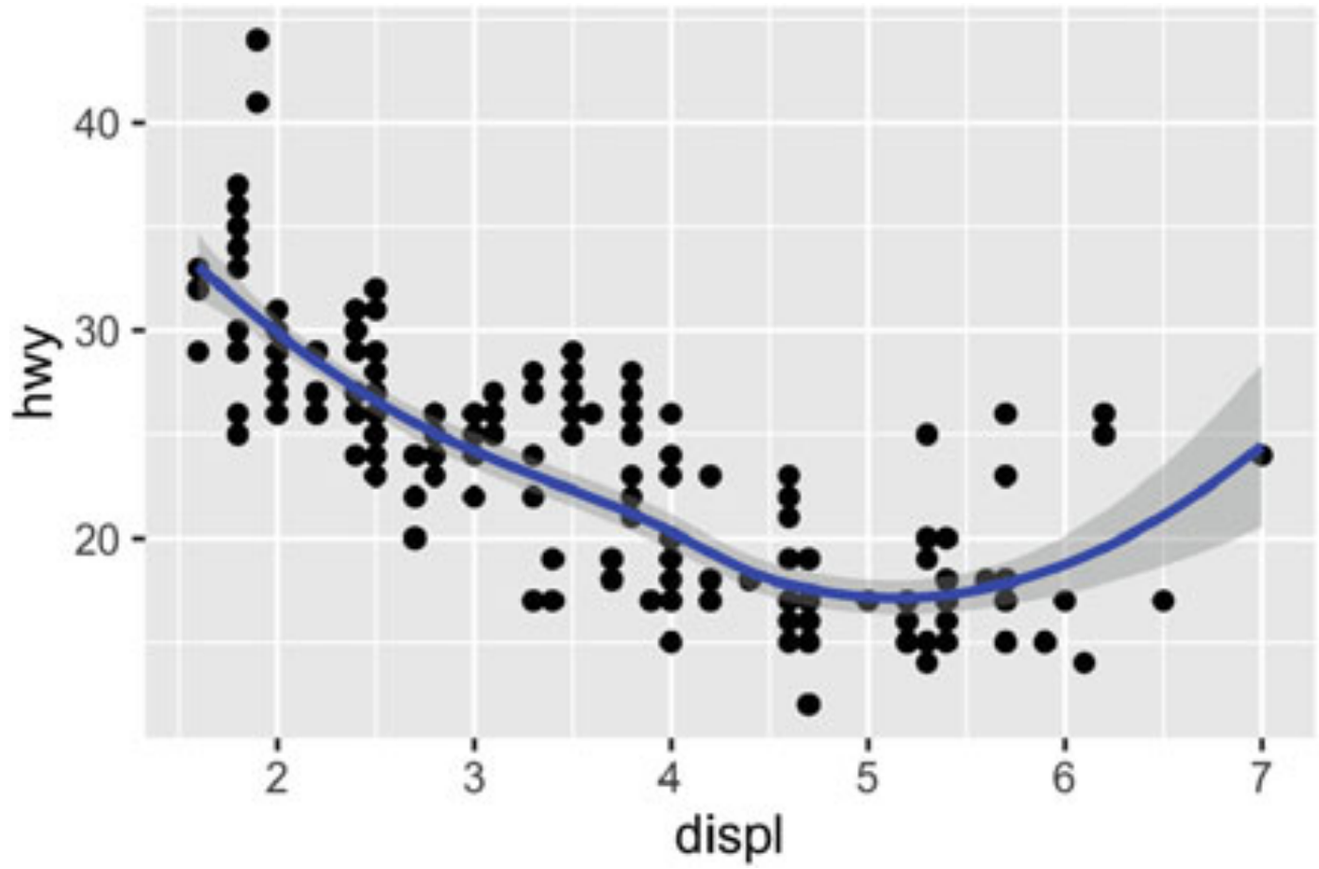


GGplot2

Geoms

- **geom_smooth**() fits a smoother to the data and displays the smooth and its standard error.
- **geom_boxplot**() produces a box-and-whisker plot to summarise the distribution of a set of points.
- **geom_histogram**() and **geom_freqpoly**() show the distribution of continuous variables.
- **geom_bar**() shows the distribution of categorical variables.
- **geom_path**() and **geom_line**() draw lines between the data points.

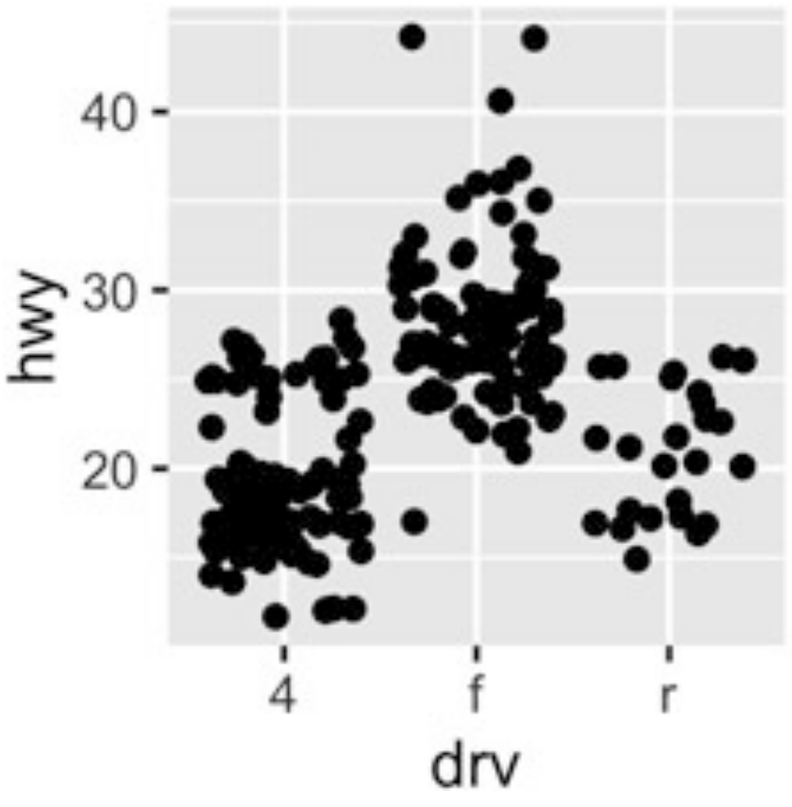
```
ggplot(mpg, aes(displ, hwy)) +
geom_point() +
geom_smooth()
```

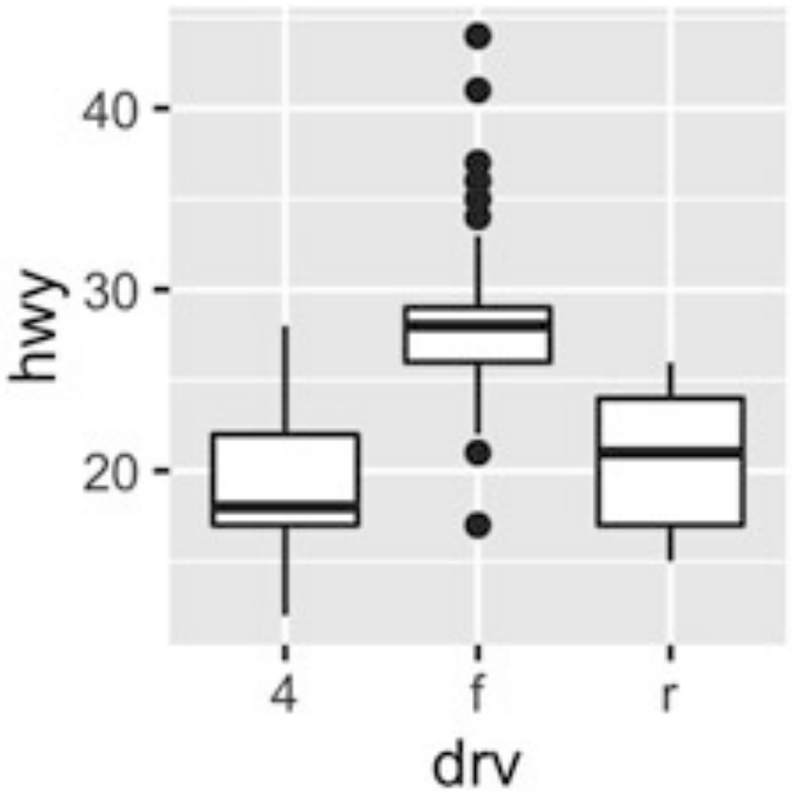


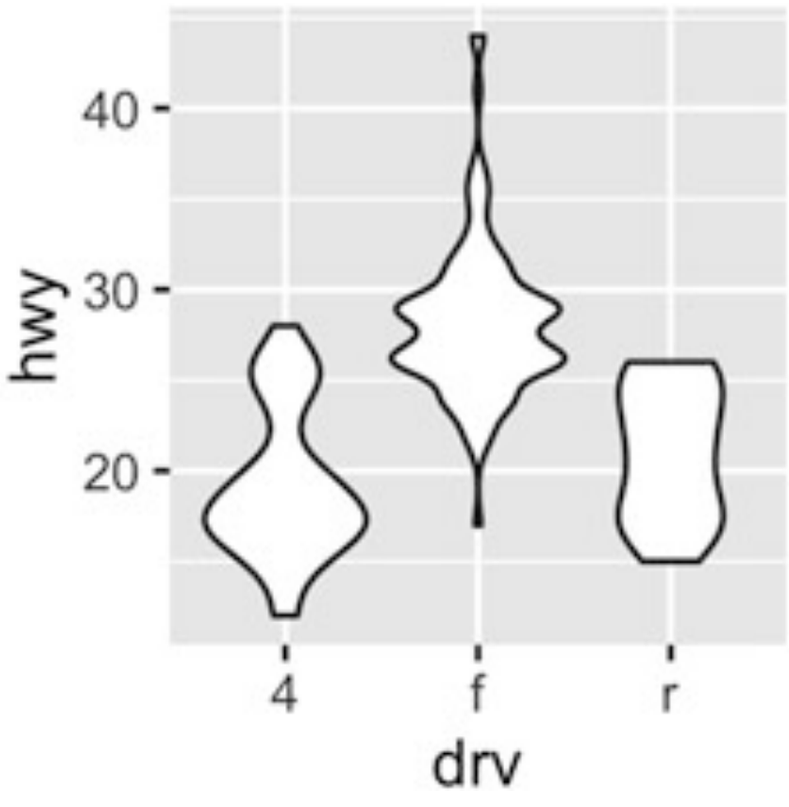
GGplot2

Geoms

- ggplot(mpg, aes(drv, hwy)) + geom_jitter()
- ggplot(mpg, aes(drv, hwy)) + geom_boxplot()
- ggplot(mpg, aes(drv, hwy)) + geom_violin()



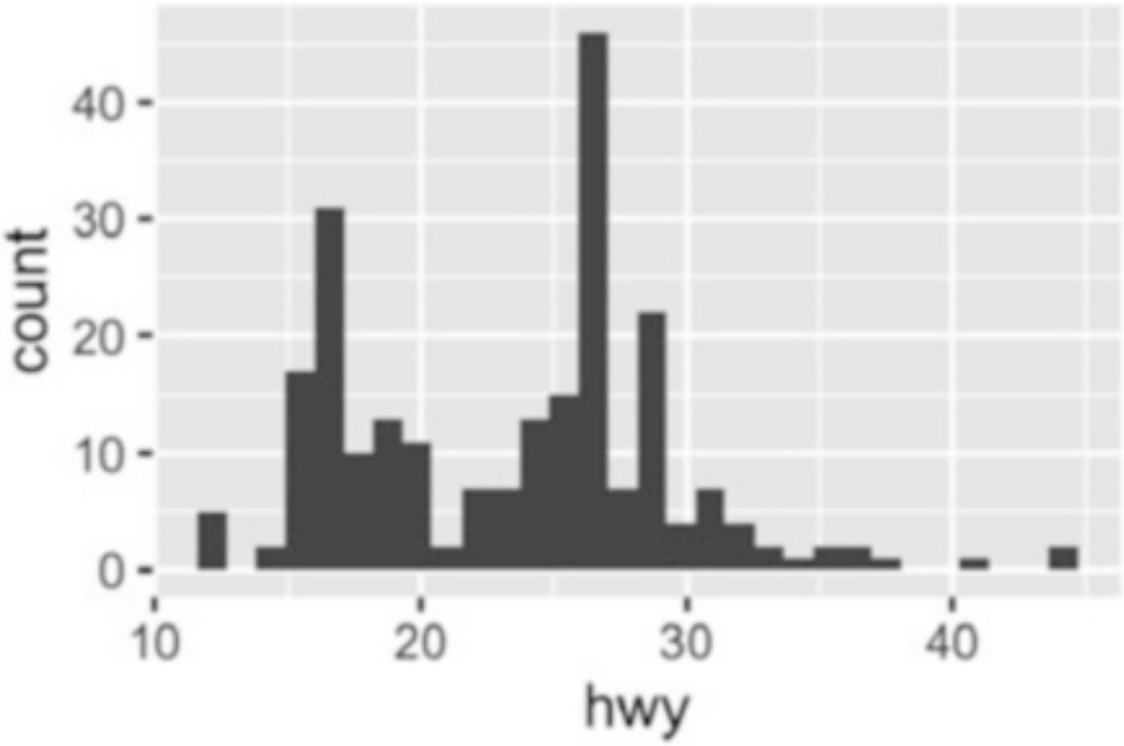


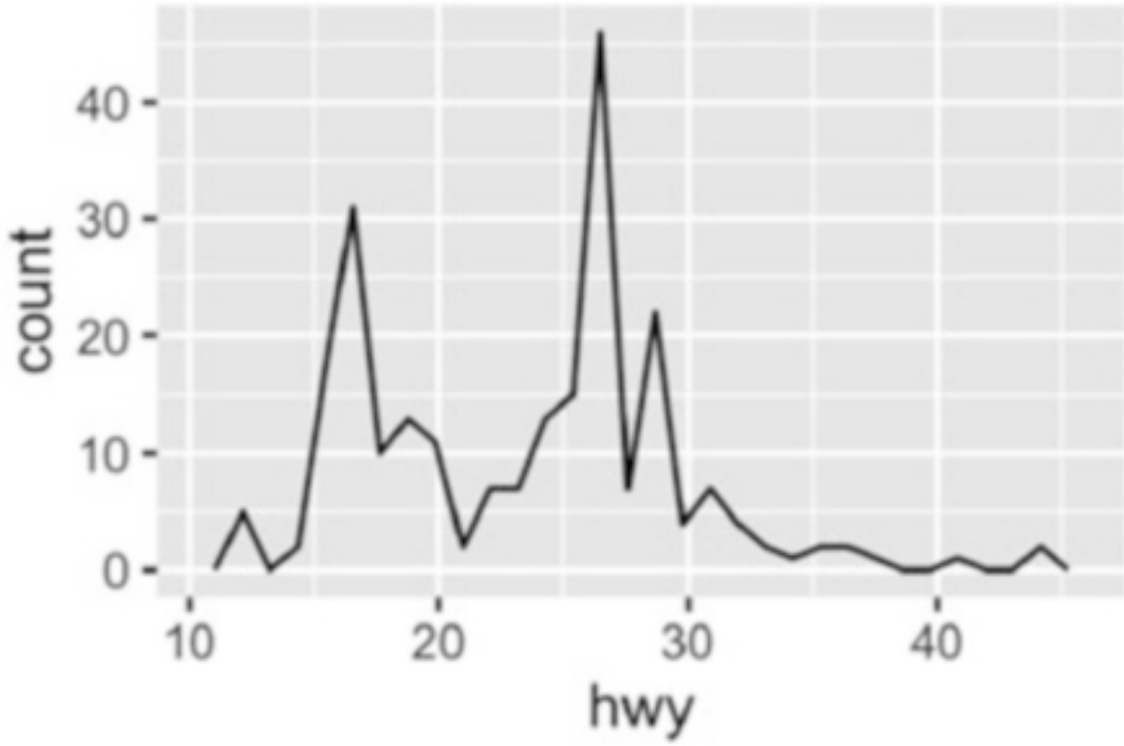


GGplot2

Geoms

- ggplot(mpg, aes(hwy)) + geom_histogram()
- aggplot(mpg, aes(hwy)) + geom_freqpoly()

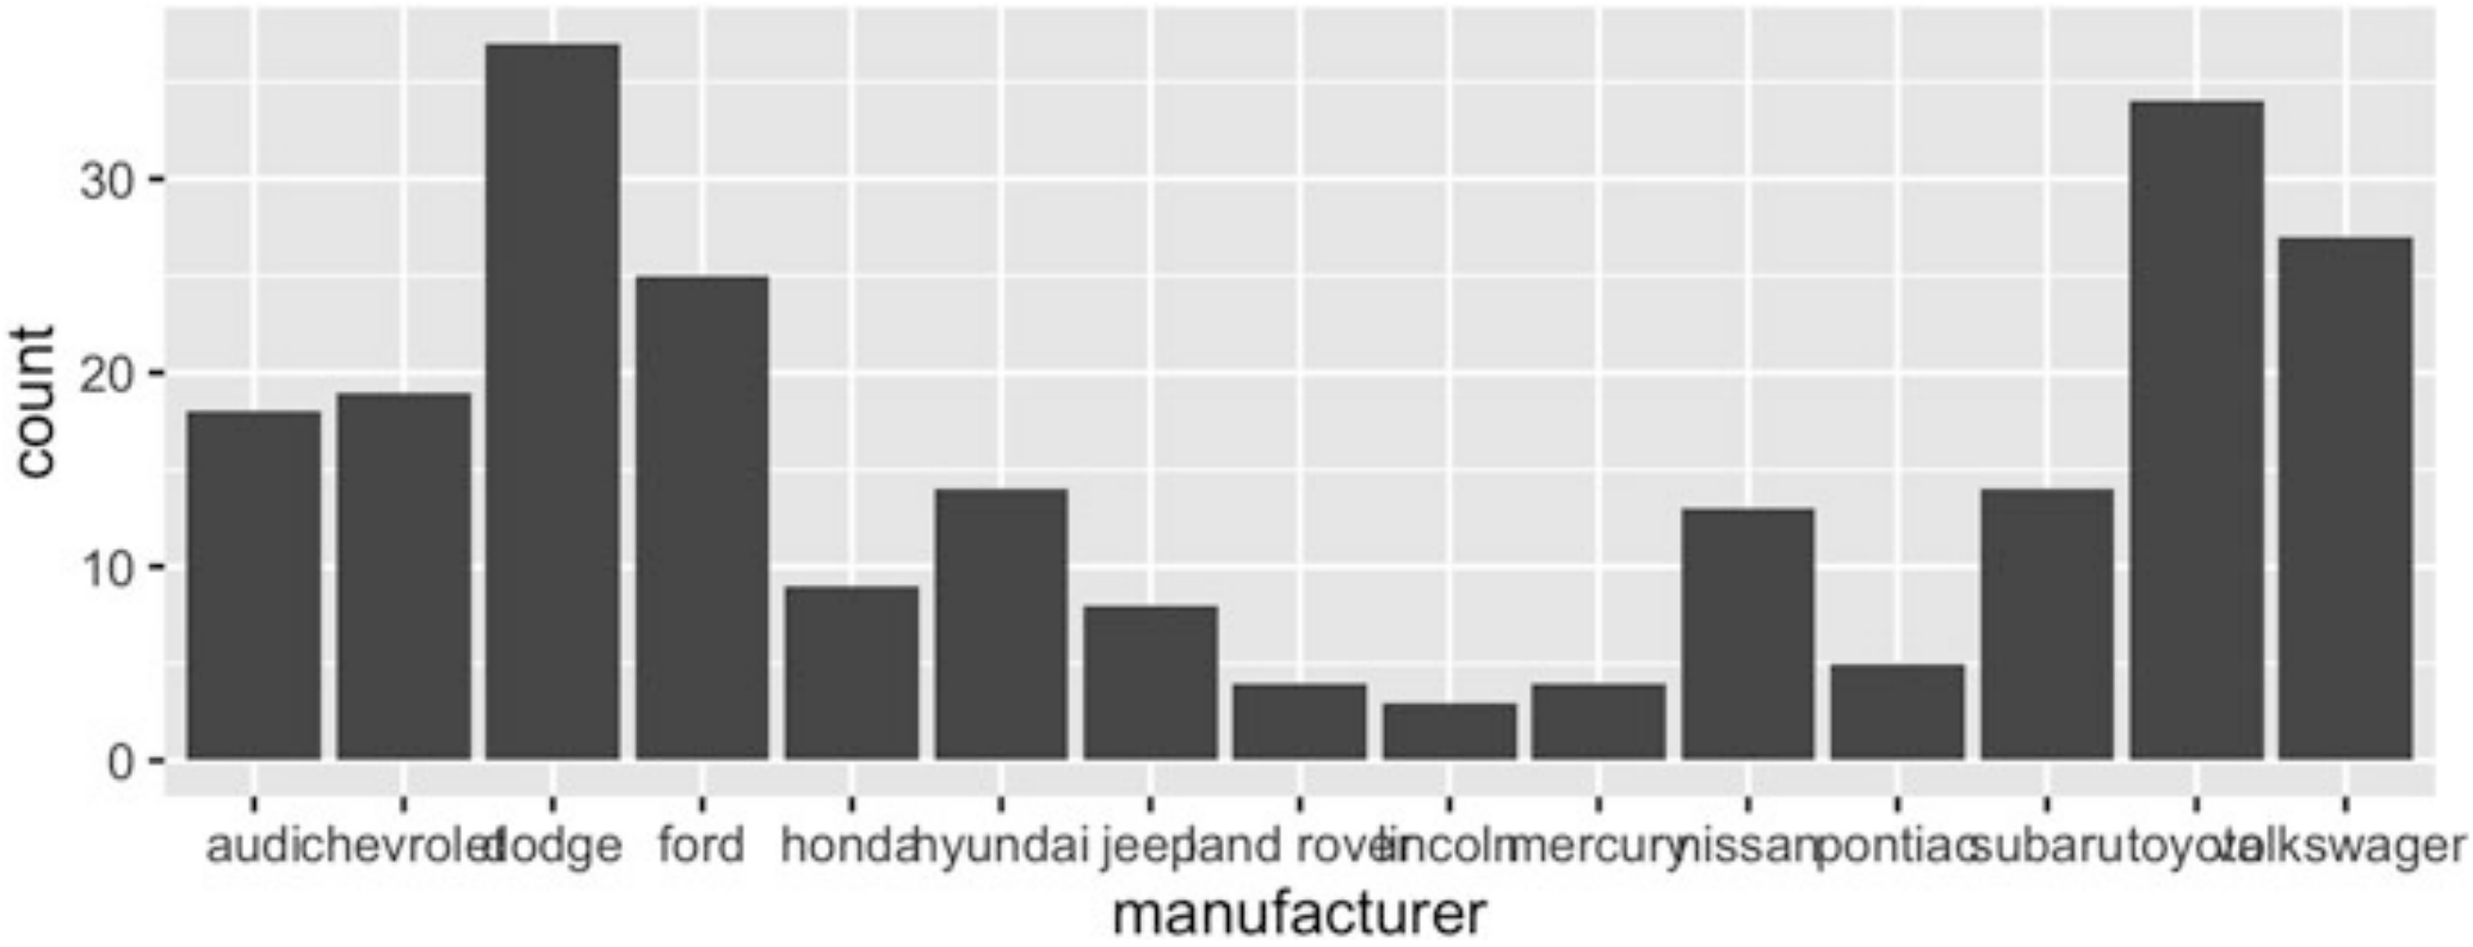




GGplot2

Geoms

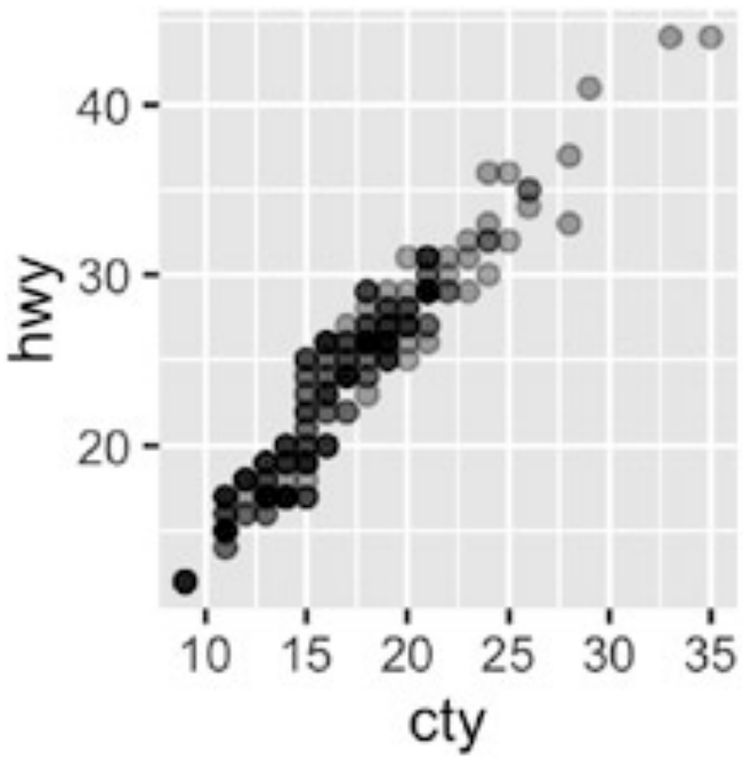
```
ggplot(mpg, aes(manufacturer)) +
geom_bar()
```

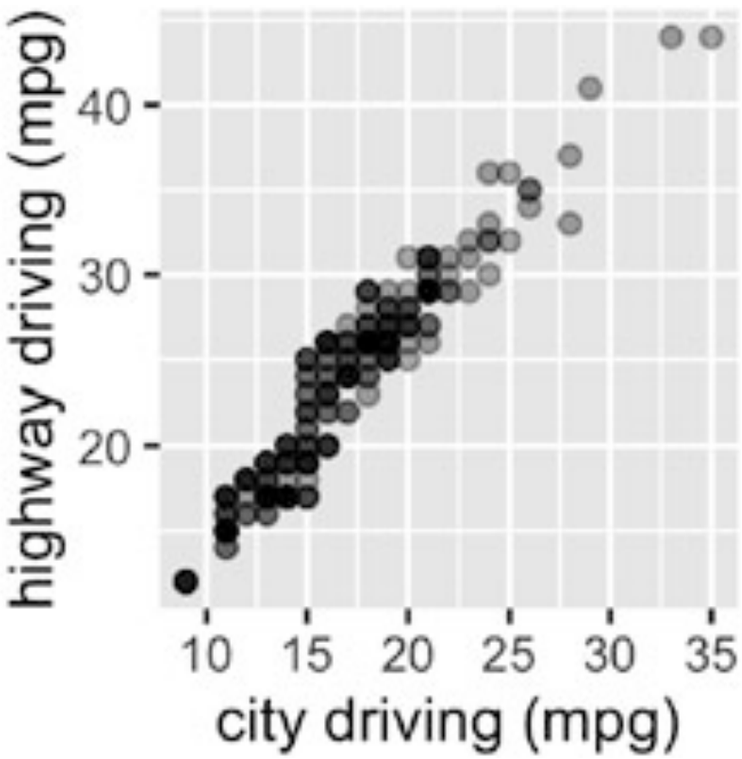


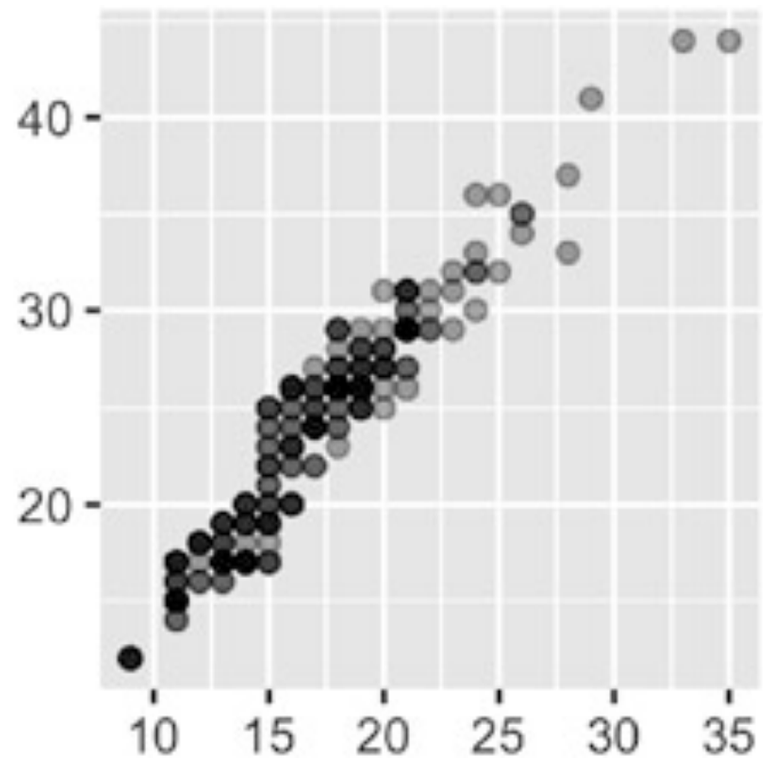
GGplot2

Geoms

- ggplot(mpg, aes(cty, hwy)) + geom_point(alpha = 1 / 3)
- ggplot(mpg, aes(cty, hwy)) + geom_point(alpha = 1 / 3) + xlab("city driving (mpg)") + ylab("highway driving (mpg)")
- ggplot(mpg, aes(cty, hwy)) + geom_point(alpha = 1 / 3) + xlab(NULL) + ylab(NULL)







GGplot2

Output

```
p <- ggplot(mpg, aes(displ, hwy, colour = factor(cyl))) + geom_point()
print(p)
ggsave("plot.png", width = 5, height = 5)
summary(p)
```
